L26 | LCM आणि HCF Program in C (Marathi) | Marathi Coding Shala

L-34 Dynamic Memory Allocation in C मराठीत | malloc(), calloc(), realloc(), free()

👉 जर तू **AI Engineer, Data Scientist, Web Developer** किंवा **Hacker** व्हायचं ठरवलं असेल —

तर Python हा पहिला आणि सर्वात महत्वाचा step आहे  

FOR LOOP IN PYTHON

1 What is a for loop?

English:

A **for loop** is used to repeat a block of code for a fixed number of times or to iterate over a sequence.

Marathi:

For loop म्हणजे **sequence मधील प्रत्येक element एक-एक करून process करण्यासाठी** वापरला जाणारा loop.

While loop → condition based

For loop → sequence / range based

2 Syntax

```
for variable in sequence:  
    statements
```

Example:

```
for i in range(5):  
    print(i)
```

```
0  
1  
2  
3  
4
```

3 range () function (Very Important)

Syntax

range(start, stop, step)

Part	Meaning
start	सुरुवात
stop	शेवट (exclude)
step	कितीने वाढायचं

Examples

```
range(5)      # 0 1 2 3 4  
range(1, 6)   # 1 2 3 4 5  
range(2, 11, 2) # 2 4 6 8 10
```

4 Basic Programs

Print 1 to 10

```
for i in range(1, 11):  
    print(i)
```

Print even numbers

```
for i in range(1, 21):  
    if i % 2 == 0:  
        print(i)
```

5 Table of a number

```
num = int(input("Enter number: "))  
  
for i in range(1, 11):  
    print(num, "x", i, "=", num * i)
```

6 Sum of first N numbers

```
n = int(input("Enter N: "))
total = 0

for i in range(1, n + 1):
    total += i

print("Sum =", total)
```

7 Loop on String

```
name = "Python"
```

```
for ch in name:  
    print(ch)
```

String मधील प्रत्येक character वर loop चालतो.

9 Loop on List

```
marks = [80, 90, 75, 60]
```

```
for m in marks:  
    print(m)
```

Sum of list elements

```
total = 0  
for m in marks:  
    total += m  
print(total)
```

10 Loop on Tuple

```
t = (10, 20, 30)
```

```
for x in t:  
    print(x)
```

1 1 Loop on Set

```
s = {10, 20, 30}
```

```
for x in s:  
    print(x)
```

👉 Set unordered असतो — output order fixed नसतो.

1 2 Loop on Dictionary

```
student = {"name": "Jay", "age": 20}
```

```
for key in student:  
    print(key, student[key])
```

Using items()

```
for k, v in student.items():  
    print(k, "=", v)
```

1 3 break statement

```
for i in range(1, 10):  
    if i == 5:  
        break  
    print(i)
```

👉 Loop थांबवतो.

1 4 continue statement

```
for i in range(1, 10):  
    if i == 5:  
        continue  
    print(i)
```

👉 Current iteration skip करतो.

1 5 else with for loop

```
for i in range(3):  
    print(i)  
else:  
    print("Loop completed")
```

👉 Loop normally complete झाला तर else चालतो.

1 6 Nested for loop

```
for i in range(1, 4):  
    for j in range(1, 4):  
        print(i, j)
```
